

Interventional Products

Angiotech[®]
Interventional

Angiotech SA is in charge of distributing all Angiotech products within radiology, biopsy, oncology, and vascular to markets within Europe, Middle East, North Africa, and Asia; either ourselves or through carefully selected distributors in these areas. You will find a complete list of our distributors at www.angioedupro.com

All Angiotech manufacturing facilities are certified in accordance with ISO 13485 and are registered with the USA FDA.

All Angiotech products sold in the European Union are in compliance with The Medical Device Directive 93/42/EEC.

Interventional Radiology from Angiotech®

We have categorized our radiology assortment under these headlines:

- Vascular
- Guidewires
- Drainage
- Accessories
- Biopsy
- Mammography
- Special Radiology

Our deep and wide assortment of radiology products has been developed through a long co-operation with leading radiologists and ultrasound specialists.

Who we are

Angiotech SA is a company in the international Angiotech Group, headquartered in Canada, Vancouver. Our broad portfolio of clinical products is widely accepted by interventional radiologists, urologists, oncologists and gastroenterologists.

Angiotech is a global specialty pharmaceutical and medical device company that discovers, develops, and markets innovative technologies and medical products primarily for local diseases or for complications associated with medical device implants, surgical interventions, and acute injury. Our portfolio of intellectual property includes over 150 issued U.S. patents and 185 pending U.S. patent applications as of October 2006.

When Angiotech acquired Surgical Specialties and InterV in the first quarter of 2006 (as part of American Medical Instruments Holdings Inc.), we were able to bring together their strong sales, marketing and manufacturing capabilities in the medical device field and combine these assets with our strength as an innovative, highly-successful R&D company.

We have well trained product specialists who can present and advise you as well as train your staff in using our products. Read more about our full range and worldwide contact information at www.angiotech.com or www.angioedupro.com

Vascular

The HemoStream® Chronic Dialysis Catheter features a unique independent triple arterial lumen design which offers unsurpassed patency while the 360 degree tip configuration prevents side walling of the vessel during aspiration.

HemoStream® Standard Kit

Box of 1

32101524	15.5F x 24 cm catheter
32101528	15.5F x 28 cm catheter
32101532	15.5F x 32 cm catheter
32101536	15.5F x 36 cm catheter
32101540	15.5F x 40 cm catheter

HemoStream® Exchange Kit

Box of 5

32001524	15.5F x 24 cm catheter
32001528	15.5F x 28 cm catheter
32001532	15.5F x 32 cm catheter
32001536	15.5F x 36 cm catheter
32001540	15.5F x 40 cm catheter

Patented Independent Triple Arterial Lumen Design:
Ensures adequate flow rates even when two lumens are completely occluded

Smooth Tip Transition:
Provides atraumatic over-the-wire insertion without the need for a peel-away sheath

360 Degree Arterial Tip Configuration:
Eliminates catheter "side-walling" against vessel wall

Designed by:

V+Pad™ Non-Invasive Hemostasis Pad

The V+Pad™ Non-Invasive Hemostasis Pad is a hydrophilic wound dressing intended for use in the local management of bleeding wounds such as vascular access sites, percutaneous catheters or tubes, surgical debridement and lacerations. V+Pad™ promotes rapid control of bleeding in patients on anticoagulation therapy. The V+Pad is easily administered by a physician, nurse or technician and provides a safe, time-saving alternative to mechanical or conventional compression methods – while providing patient safety and comfort.

- Safe, effective, adjunct to manual compression in Endovascular Procedures.
- V+Pad reduces hold times and allows for early ambulation versus manual compression alone.
- Controls persistent bleeding at central venous and arterial catheter sites, and may be cut for easy placement around vascular access catheters.
- Non-invasive, rapid hemostasis.
- Cost effective alternative to invasive closure devices.
- Easily applied by physician, nurse or technician.

V+Pad™

3935 V+Pad™ Non-Invasive Hemostasis Pad

Box of 10

Approx. 45 x 45 mm

Golden Rule® Scaling Catheters

The Golden Rule® Scaling Catheter is used to determine accurate sizing of vessel lumen prior to aortic graft placement, angioplasty, and other interventional procedures.

- Gold, radiopaque bands placed at precise 1 cm intervals.
- Pigtail catheter with 21 gold radiopaque bands, enable accurate measurement up to 20 cm.
- Straight catheter with 11 gold radiopaque bands, enable accurate measurement up to 10 cm.
- Allows high pressure injections.
- Accepts .035" guidewire.

Golden Rule® Scaling Catheter

Box of 5

3528 05 090 5F x 90 cm, Pigtail catheter with 21 gold rings, 6 side holes, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi

3529 05 065 5F x 65 cm, Straight catheter with 11 gold rings, 10 side holes, accepts .035" (0.89 mm) guidewire,

Vena Stick™ Set

Vena Stick™ Vascular Access Set for placement of .035" and .038" guidewires into the vascular system using fine needle access to reduce puncture site and vessel trauma.

- 21G entry needle with echogenic tip. Echogenic needle tip identifies the needle tip position within the vessel during ultrasound imaging.
- .018" nitinol guidewire, with malleable radiopaque tip, provides 1:1 torque control and kink-resistance for negotiating through tortuous anatomy. Smooth transition from nitinol core to hydrophilic coated.
- Radiopaque tip provides excellent manoeuvrability.
- Vena-Stick™ features a smooth transition from inner dilator to the outer sheath.
- Multiple sizes offer clinical flexibility.

The short needle version is a fine needle introducer set consisting of 21G needle x 3.8 cm, .018" radiopaque tip nitinol guidewire x 50 cm, coaxial inner dilator accepting .018" guidewire and outer dilator 10 cm long accepting .038" guidewire.

The short needle version is used for venous or arterial puncture and tissue dilation.

Vena Stick™ Set

Box of 10

- 3902 04 300** 4F x 10 cm co-axial introducer, 21G (0.8 mm) x 7 cm puncture needle, .018" (0.46 mm) nitinol guidewire x 50 cm
- 3902 05 300** 5F x 10 cm co-axial introducer, 21G (0.8 mm) x 7 cm puncture needle, .018" (0.46 mm) nitinol guidewire x 50 cm

Vena Stick™ Short Needle Version

Box of 10

- 3902 04 400** 4F x 10 cm co-axial introducer, 21G (0.8 mm) x 3.8 cm puncture needle, .018" (0.46 mm) nitinol guidewire x 50 cm

DSA Flush Catheters

Radiopaque Flush Catheter with winged hub and a strain relief. Pigtail and Racket type catheters are supplied with removable split straighteners.

- Thin wall construction for large internal lumen to ensure high flow rate.
- Winged hub and strain relief improves catheter manipulation.

DSA Flush Catheter • Pigtail

Box of 10

- 3500 04 065** 4F x 65 cm, 8 side holes, flow rate 18 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1000 psi
- 3500 04 090** 4F x 90 cm, 8 side holes, flow rate 16 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1000 psi
- 3500 05 065** 5F x 65 cm, 8 side holes, flow rate 29 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi
- 3500 05 090** 5F x 90 cm, 8 side holes, flow rate 28 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi

DSA Flush Catheter • Straight

Box of 10

- 3501 04 065** 4F x 65 cm, 10 side holes, flow rate 18 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1000 psi
- 3501 04 090** 4F x 90 cm, 10 side holes, flow rate 16 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1000 psi
- 3501 05 065** 5F x 65 cm, 10 side holes, flow rate 29 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi
- 3501 05 090** 5F x 90 cm, 10 side holes, flow rate 28 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi

DSA Flush Catheter • Racket

Box of 10

- 3530 04 065** 4F x 65 cm, 8 side holes, flow rate 18 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1000 psi
- 3530 05 065** 5F x 65 cm, 8 side holes, flow rate 29 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi
- 3530 05 090** 5F x 90 cm, 8 side holes, flow rate 28 ml/sec, accepts .035" (0.89 mm) guidewire, max pressure 1200 psi

Guidewire Introducer Needles

Guidewire Introducer Needles

- Designed for anterior, single wall, arterial percutaneous puncture.
- Funneled (tapered) luer hub allows trouble-free guidewire insertion.
- Available with a clear window wall hub.
- Also available with winged base plate.

GW/xxxxWW

Seldinger Needles

- Designed for easy, atraumatic, percutaneous arterial puncture.
- Colour coded stylet.

Modified Potts/Courmand Needle

- Designed for carotid angiography, direct arterial pressure monitoring, blood sampling and percutaneous catheterization.

Window Wall Introducer

Box of 25

GW1902WW 19G (1.0 mm) x 7 cm, accepts guidewire .035" (0.89 mm)
GW1802WW 18G (1.2 mm) x 7 cm, accepts guidewire .038" (0.97 mm)

Winged Introducer

Box of 25

BGWI1902 19G (1.0 mm) x 7 cm, accepts guidewire .035" (0.89 mm)
BGWI1802 18G (1.2 mm) x 7 cm, accepts guidewire .038" (0.97 mm)

Introducer Needle

Box of 25

GW1902 19G (1.0 mm) x 7 cm, accepts guidewire .035" (0.89 mm)

Vascular Dilators

Radiopaque polyethylene dilators feature smooth rounded tips with gradual tapering facilitating tissue penetration.

- Perfect tapering improves tissue penetration.
- Luer lock hub for contrast injection and guidewire exchange.
- Radiopaque for fluoroscopic visualisation.

G

guidewires

Bench test results of CanaliZer®

Stiffness

The stiffness of Standard version is measured by placing the guidewire over 2 trestles 40 mm apart. The columns illustrate the power needed to bend the guidewire 5 mm

Stop slip effect

Power needed to activate the guidewire after not being moved for 15 seconds

Dynamic friction

Power needed to activate the guidewire after not being moved for 15 seconds and to keep it moving in an obstacle measured after 25, 50, 75, 100, 150 and 200 mm

Durability of hydrophilic coating

Durability of coating tested after 90 minutes in saline and measurement of friction after 1, 10, 20 and 30 tests

You will benefit from ...

- A hydrophilic polyurethane covered nitinol guidewire.
- A super elastic nitinol core covered with a highly radio opaque polyurethane sleeve and an excellent hydrophilic coating.
- A quick fluoroscopic check during procedure, due to a maximal radiopacity.
- A pre-angled and very durable tip which secures stability during long term manoeuvrability.
- A super elastic nitinol core which offers kink-resistance and atraumatic path finding due to 1:1 torque and an outstanding coating.
- A coating that does not dry out and feels less sticky.

A super elastic nitinol core covered with a highly radiopaque polyurethane sleeve and an excellent hydrophilic coating.

- Maximal radiopacity secures a quick fluoroscopic check during procedure.
- The coating does not dry out and feels less sticky.
- The super elastic nitinol core offers kink resistance and atraumatic path finding due to 1:1 torque and an outstanding coating.
- Colour-coded curve straightener for easy introduction.
- The tip is pre-angled and very durable, which secures stability during long term manoeuvrability.

POINTER® Nitinol Guidewire

Flexibility and stability, strength and malleability all in one wire – available in two sizes: .018" and .020"

- Excellent visibility through highly radiopaque coil tip.
- Smooth transition from nitinol core to hydrophilic coated radiopaque tip provides excellent manoeuvrability.
- HYDROFEEL® hydrophilic coating on tip for less traumatic path finding/advancement.
- PTFE coated nitinol shaft for minimal friction during introduction and manipulation.
- Nitinol shaft construction provides 1:1 torque control and kink-resistance for negotiating through tortuous anatomy.

POINTER® Nitinol Guidewire • 4 cm flexible coil *Box of 5*

1804 18 210 .018" (0.46 mm) x 210 cm

Lunderquist Stainless Steel Guidewires

The Lunderquist Guidewire is an extremely stiff guidewire used to provide extra support during non-vascular procedures. Flexible tip for access to delicate or difficult areas.

- Lunderquist guidewire for firm support.
- Available in a variety of lengths and tip configurations.

Lunderquist Stainless Steel Guidewire • Straight *Box of 10*

1052 35 120 .035" (0.89 mm) x 120 cm, 7.5 cm flexible coil

WORKER® Guidewires

WORKER® guidewires are manufactured with a pre-coating technique offering a safe and flexible guidewire.

The PTFE coating used is the latest formula resulting in low friction. All guidewires are packed in a circular dispenser facilitating easy flushing of the guidewire.

- Low friction due to PTFE coating.
- Malleable tip.
- Colour coded guidewire straightener locks the wire in the dispenser and provides easy introduction in the puncture needle or catheter.

- High torque-control.
- Smooth transition from rigid core to radiopaque coil tip provides excellent manoeuvrability.
- Nitinol offers kink resistance.
- Stainless steel for maximum back-up.

Drainage

SKATER® Single Step Drainage Sets

SKATER® catheter with Choice Lock is suitable for a variety of applications. Single step procedures are simple and safe with this unique catheter. The catheter is coated with HYDROFEEL® hydrophilic coating for minimal friction during insertion.

- Choice Lock needle for single handed release of stylet.
- Soft polyurethane for optimal kink resistance and perfect configuration memory and HYDROFEEL® coating for easy insertion.
- Large oval drainage holes and large lumen designed for maximal drainage capacity.
- Minimal tissue trauma and ulcerations reduce patient discomfort.
- With locking or non-locking pigtail.

SKATER® Nephrostomy Catheters

SKATER® catheter for nephrostomy using the Seldinger technique. The catheter is made of soft polyurethane for optimal kink resistance and perfect configuration memory.

- SKATER® Nephrostomy catheter with locking or non-locking pigtail, and with metal or flexible stiffening cannula.
- HYDROFEEL® coating at the distal tip for easy insertion.
- Large lumen and large oval drainage holes designed for maximal drainage capacity.
- Removable pigtail straightener.

SKATER® Biliary Drainage Catheters

SKATER® catheter for drainage of the bile duct using the Seldinger technique. The catheter is made of soft polyurethane for optimal kink resistance and perfect configuration memory.

Box of 5

- Soft polyurethane for optimal kink resistance and perfect configuration memory.
- HYDROFEEL® coated on the distal tip for easy insertion.
- Non-kinking and flexible stylet included.
- Large oval drainage holes and large lumen designed for optimal drainage capacity. 4 side holes in pigtail and 7 or 8 side holes on the shaft. Last hole marked with a radiopaque ring.
- Minimal tissue trauma and ulcerations reduce patient discomfort.

SKATER® Introducer Sets

The SKATER® Introducer Set provides easy, accurate and atraumatic placement of .035" or .038" guidewires in non-vascular procedures.

- Smooth transition between the 4 F dilator and the 6 F sheath.
- Embedded gold ring marker enhances visualization for accurate fluoroscopic placement.
- 21G needle minimizes tissue trauma.
- .018" guidewire with malleable coil tip for easy advancement.

- 7653 08 300** 8F Set, 21G (0.8 mm) x 15 cm trocar needle, .018" (0.46 mm) x 80 cm nitinol access wire, 6F x 26 cm co-axial dilator, .035" (0.89 mm) x 150 cm Amplatz guidewire, 8F x 20 cm dilator, 8F x 40 cm catheter with locking pigtail
- 7653 10 300** 10F Set, 21G x 15 cm trocar needle, .018" x 80 cm nitinol access wire, 6F x 26 cm co-axial dilator, .035" (0.89 mm) x 150 cm Amplatz guidewire, 8F x 20 cm and 10F x 20 cm dilators, 10F x 40 cm catheter with locking pigtail

SKATER® Centesis Catheter Needles

Designed for percutaneous fluid aspirations and small volume drainage procedures.

- Vent plug allows air to exit catheter during insertion and protects clinician from fluid leakage.
- Luer locked introducer needle for secure one-handed placement and hollow stylet needle design permits aspiration of fluid prior to stylet removal.
- Echogenic needle tip facilitates visualisation during ultrasound guided placement.
- Tapered catheter tip ensures good transition between catheter and needle to facilitate smooth insertion.
- Four side holes on the distal tip of the catheter facilitate drainage within small cavities.

SKATER® Centesis Catheter Needle

TCD Drainage Catheters

The catheter is made of polyethylene. Applications: TCD Catheter; Drainage of cysts, abscesses, hematomas, pleural exudates, ascites, gall bladders, nephrostomies, pleuracentese and paracentesis.

TCD Drainage Catheter with safety string lock system; Drainage of large cysts, gall bladders and nephrostomies.

- Radiopaque Polyethylene – for excellent radiopacity.
- Optimal wall thickness for configuration memory.
- Optimal sized side holes along inner pigtail curve.
- With or without Safety String Lock System.

TCD Single Step Drainage Sets

The Choice Lock needle ensures simple single-handed catheter/needle snap lock. Polyethylene pigtail catheter with 6 side holes supplied with trocar needle.

Applications: Choice Lock TCD Single Step Drainage Set (7160); Single step drainage of cysts, abscesses, hematomas, pleural exudates, ascites, gall bladders and nephrostomies.

Choice Lock TCD Safety String Lock System (7165);

Single step drainage of large cysts, gall bladders and nephrostomies.

- Perfectly tapered tip for optimal penetration.
- Radiopaque polyethylene for superior radiopacity,
- Choice Lock needle for single handed release of stylet.
- With or without Safety String Lock System.

Hawkins™ Blunt Needle Access System

Hawkins™ Blunt Needle Access System

- Provides a lightweight method of targeting, remaining in place while position is confirmed. This is especially valuable in CT guided procedures.
- The adjustable needle stop localises the outer cannula to the target, preventing forward migration.
- The outer cannula has an echogenic tip, promoting accurate placement under ultrasound guidance.
- Numerically ordered centimetre markings on the outer cannula facilitate precise depth placement.
- Accommodates most guidewires, biopsy needles, and biopsy instruments.

Drainage Bags

350 ml sterile drainage bag with flocked back and bottom outlet. Should be used with a male to male connecting tube e.g. 4040 40 xxx for secure connection to the drainage catheter.

- Flocked back reduces sweating.
- Minimal patient discomfort.
- Anti-reflux valve to prevent retrograde contamination.
- Acceptable size – can be hidden beneath clothes.
- High patient acceptance.

8500 07 350 350 ml drainage bag – female. *Box of 50*

600 ml sterile drainage bag with bottom outlet and adjustable drain tube length.

- Soft kink-resistant tube can be cut and fit to the appropriate length.
- Twist type valve for quick and easy emptying of drainage bag.
- Anti-reflux valve to prevent retrograde contamination.
- Fully adjustable soft belt.

DBAG600 600 ml drainage bag with adjustable drain tube – male luer lock. *Box of 20*

New device for fixation of all drainage catheters

Reduce risk of catheter dislocation – without suturing

SKATER® FIX is a latex free catheter fixation device, consisting of a central thin carrier which has hydrocolloid adhesive and is covered with non woven medical grade adhesive. The soft foam support block and velcro prevent the catheter from kinking.

The catheter will be mechanically fixed with velcro, and minimal tape is involved directly on the catheter.

The velcro cover can be opened for puncture site inspection. In this way you have the possibility to look for infection or leakage whenever required.

- Latex free.
- Safe anchoring of drainage catheter up to one week.
- Allows inspection of puncture site without change of dressing.
- Easy to change.
- Minimal risk of catheter dislocation during change of fixation disk.
- Foam bridge prevents catheter kinking.
- Clean catheter with no tape residuals.
- Adjustable to catheters from 5 to 16 French.
- Hydrocolloid carrier will absorb body fluids from puncture site.
- Minimum risk of skin irritation.
- Disc follows patient contour and movements.

SKATER® FIX catheter fixation device

Box of 25

8025 00 001

Latex free catheter fixation device

Skin Fix for Connecting Tubes

Skin Fix consists of an adhesive area of microporous tape which is applied to the patient's skin, and a fixation strap which keeps the connecting tubes in place.

- Comfortable (non-irritant).
- Permeable to humidity and heat.
- Moisture resistant.
- Follows the contours of the skin.
- Fixation strap – with strong adhesion.

Biopsy

Bio-Seal Lung Biopsy Tract Plug System

A state-of-the-art innovation in the prevention of pneumothorax.

- Bio-Seal™ is a single use disposable system intended for the prevention of pneumothorax following percutaneous lung biopsy.
- The patented hydrogel plug resorbs into the patient's body after healing of the puncture site has occurred.
- Each Bio-Seal™ system features two sets of plugs and co-axial adaptors to accommodate multiple lung biopsy sites.
- Angiotech™ offers a broad range of 19G introducers (see back page) designed for compatibility with the Bio-Seal™ plug adaptor. These introducers may be used in conjunction with any 20G or 22G biopsy device.

BioPince® Full-Core Biopsy Instruments

BioPince® utilises the revolutionary “tri-axial “ Cut and Capture cannula system, designed to harvest diagnostic quality specimens while reducing the risk of crush artefact and tissue fragmentation.

- A cylindrical, full core specimen is harvested for clinical diagnosis. Up to 59% more tissue volume than traditional core biopsy devices that use the side notch technology.
- Variable stroke lengths enhance clinical flexibility: 13 mm yields 9 mm specimen length, 23 mm yields 19 mm specimen length, or 33 mm yields 29 mm specimen length.
- Available in 18G and 16G. Numerically ordered centimetre markings facilitate precise depth placement of the needle.
- Light weight and ease of firing make the BioPince® ideal for CT guided procedures.
- Can be used with Co-axial Introducer Needles.

Reusable Biopsy Instruments

Pro-Mag™ Ultra Automatic Biopsy Instrument is designed to harvest high quality histological specimens.

- Features a 25 mm “Throw” advancement.
- Trigger is easily actuated (fired) from the front or rear of the instrument.
- Built-in safety automatically activates, preventing accidental firing.
- Easy specimen retrieval without removing the needle from the instrument.
- May be sterilized using conventional methods.

Pro-Mag™ Ultra Biopsy Needles

Specially designed for use with Pro-Mag™ Ultra Automatic Biopsy Instrument. High quality core biopsy needles provide histological information for diagnosis characterization of suspect lesions.

- A 19 mm sample notch ensures sufficient tissue for clinical diagnosis.
- Unique, patented hub design obsoletes needle “spacers”.
- Numerically ordered centimetre markings facilitate precise depth placement.
- Each needle has an echogenic tip for accurate placement under ultrasound guidance.
- Hubs are colour coded for easy gauge size determination.

Tru-Core® I Biopsy Needles

High quality core biopsy needles provide histological information for diagnosis and characterization of suspect lesions.

- A 19 mm sample notch ensures sufficient tissue for clinical diagnosis.
- Unique, patented hub design obsoletes needle “spacers”.
- Numerically ordered centimetre markings facilitate precise depth placement.
- Each needle has an echogenic tip for accurate placement under ultrasound guidance.
- Hubs are colour coded for easy gauge size determination.
- Can be used with co-axial introducer needles.

7633

ACN™ Biopsy Needles

ACN

ACN

Specially designed for use with Pro-Mag™ 2.2 Automatic Biopsy Instrument. High quality core biopsy needles provide histological information for diagnosis characterization of suspect lesions.

- A 17 mm sample notch ensures sufficient tissue for clinical diagnosis.
- Each needle has an echogenic tip for accurate placement under ultrasound guidance.
- Numerically ordered markings facilitate precise depth placement.
- Hubs are colour coded for easy gauge size determination.
- Can be used with co-axial introducer needles.

Biopsy Needle Guides

Needle guides are designed specifically for use in conjunction with the “Lorad Stereo Loc II” Prone Stereotactic System for core biopsy of the breast.

- Guides are available for 14G through 22G needles.
- Guides are available in both “closed type” and “open type” models.
- All needle guides are packed two per package, with the exception of the 14 G model, which has one guide per package.

Ultra-Core™ Biopsy Needles

Specially designed for use with Bard® MAGNUM® and BIP High Speed Multi Biopsy Instrument. High quality core biopsy needles provide histological information for diagnosis characterization of suspect lesions.

- Unique, patented hub design obsoletes needle “spacers”. A 19 mm sample notch ensures sufficient tissue for clinical diagnosis.
- Each needle has an echogenic tip, promoting accurate placement under ultrasound guidance.
- Numerically ordered markings facilitate precise depth placement.
- Hubs are colour coded for easy gauge size determination, available in a variety of gauge sizes and lengths.
- Can be used with Co-axial Introducer Needles.

MAGNUM is a registered trademark of C.R. Bard, Inc. or an Affiliate

7626

Tru-Core® Automatic Biopsy Instrument

7631

The Tru-Core® II can easily be operated with one hand making it ideal for procedures requiring ultrasound guidance. Its small size and light weight make it equally ideal for CT guided core biopsies.

- Simple “pull/push” operation of the control knobs creates a device which is truly single-handed in operation.
- A 22 mm “throw” advancement, combined with a 19 mm sample notch, harvest sufficient tissue for clinical diagnosis.
- Small instrument size makes the Tru-Core® II compatible with most upright stereotactic machines.
- Each instrument has an echogenic tip for accurate placement under ultrasound guidance.
- Needles are colour coded for easy gauge size determination, which can be seen through the “window” on the bottom of the device.

Super-Core™ Semi-automatic Biopsy Instrument

The Super-Core™ is a compact lightweight, adjustable and easily manoeuvred biopsy instrument. After setting the cutting cannula spring, the Super-Core™ may be operated with one hand, leaving the other hand free to manipulate a guidance device; i.e. an ultrasound probe.

- The specimen “notch” is adjustable (exposing either 19 mm or 9.5 mm), thus providing maximum clinical flexibility.
- The specimen “notch” may be safely positioned in the lesion before the spring-loaded cutting cannula is fired.
- Each needle has an echogenic tip for accurate placement by ultrasound guidance.
- Numerically ordered centimetre markings facilitate precise depth placement.
- Can be used with co-axial introducer needles.

Soft Tissue Biopsy Needles

MaxiCELL® biopsy needle harvests more aspiration for cytological evaluation.

- Harvests on both forward and backward thrusts of the needle, achieving a greater quantity of harvested cells.
- A 30 degree matched ground needle tip geometry helps harvest a cluster of intact cells.
- Each needle has numerically ordered centimetre markings on the outer cannula to facilitate depth placement.
- Available with an echogenic tip on the outer cannula to promote accurate placement under ultrasound guidance.
- Each needle has a unique, adjustable needle stop, which allows you to restrict forward movement, effectively localizing the needle tip to the biopsy site.

T-Lok™ Bone Marrow Biopsy Needle

The ergonomically designed “twist-lock” handle, combined with the unique “double-diamond” stylet point, provide clinical comfort while easily penetrating hard bone

The T-Lok™ Bone Marrow Biopsy Needle includes our unique T-Lok™ Extraction Cannula aimed at ensuring a superior quality biopsy by entrapping bone marrow in the needle without altering the architecture of the sample. The unique design provides an exceptional ability to capture and retain bone marrow specimens from multiple myeloma patients. An additional benefit of T-Lok™ is the elimination of a painful deflection technique to harvest a diagnostic quality specimen. A winning combination: Improved patient comfort, easier marrow sampling, Low risk of specimen loss, and better quality specimens.

Features include:

- Unique “double-diamond” stylet point designed for quick and easy penetration into the marrow cavity.
- “Twin Peaks” cutting edge on the tapered distal cannula tip provides superior biopsy coring ability.
- Ergonomically designed handle allows the clinician to apply sufficient pressure for penetration without excessive hand fatigue.
- “Twist-Lock” design keeps the handle assembly intact during bone penetration.

Bone Marrow Aspiration Needle

Safe and simple aspiration from the sternum or iliac crest The ergonomically designed “Twist-Lock” handle, combined with the match ground cannula and stylet points, provide clinician comfort while easily penetrating hard bone. Safe aspirations at the sternum can be performed by adjusting the needle stop to control the depth of penetration. The needle stop can be removed if aspirating at the iliac crest. Available in two gauge sizes.

Features include:

- Luer lock connector on the handle for secure syringe attachment
- An adjustable, removable needle stop safely controls depth of penetration

Techna-Cut™ Biopsy Needle

The Techna-Cut™ is designed to perform simple, reliable biopsies of soft tissue. The Trocar Style needle tip allows for easy direct puncture while minimizing tissue damage.

- Unique design allows for easy specimen retrieval.
- Numerically ordered centimetre markings on the outer cannula facilitate precise depth placement.
- A precise cutting edge on the outer cannula contributes to a complete, intact core specimen.
- A unique stylet design, combined with a locking syringe, provides excellent vacuum for maximizing specimen retention in the outer cannula.

Osty-Core™ Bone Biopsy Needle

Unmatched ease in needle placement and biopsy coring. The unique tip geometry of the Osty-Core™ Bone Biopsy Needle is designed to provide superior needle entry and coring characteristics without distorting the biopsy specimen. All needles are 16G, available in three lengths.

- The ergonomic handle features a "Twist-Lock" design, which stabilizes the needle during placement.
- A luer lock connector on the handle for secure syringe attachment.
- An adjustable, removable needle stop safely controls depth of penetration.
- Can be used with Co-axial Introducer Needles.

V-Mark™ Breast Biopsy Site Marker

V-Mark™ is a state-of-the-art patented device, which combines a bio-absorbable plug and a permanent anchor, to permanently mark a breast biopsy site, allowing for future identification of the biopsied area. The highly visible plug portion is absorbed into the breast tissue, while the anchor remains in place allowing for long-term stability and permanent visualization.

The bio-absorbable plug provides ultrasound visibility for up to six weeks, and allows for rapid and accurate marker placement under ultrasound guidance. The titanium hook allows for permanent visibility under MRI and mammography. V-Mark™ is a major step forward in the marking of breast lesions.

- V-Mark's dual-anchoring capability minimizes risks of malposition or migration.
- The embedded titanium hook is designed to allow tissue to grow in and around it, providing permanent marking of the biopsy site.
- The bio-absorbable plug provides ultrasound visibility for a predictable period of time in breast tissue.
- V-Mark™ is designed to provide easy future identification of the breast biopsy site.

V-Mark™ Breast Biopsy Site Marker is available in 3 delivery systems:

- 11G Mammotome® vacuum assisted biopsy system
- 9G / 12G for use with Suros Vacuum Assisted Biopsy System
- 14G Breast Biopsy Site Marker for use with 14G Systems or Ultrasound Guidance

Repositionable Breast Localization Needles

Homer Mammalok® Gold in a strong, flexible J-curved wire, which may be retracted and repositioned as often as necessary to achieve accurate placement.

- Exclusive J-curved wire and stabilizer design locks the needle and wire in place, anchoring the system to prevent wire migration while protecting against unguarded needle penetration during breast compression and patient transport.
- Unique alloy wire greatly reduces the risk of accidental wire transection during surgical biopsy.
- System provides a palpable guide to the surgeon, thereby offering a choice of paths to the lesion.
- Easy-to-read centimetre markings facilitate accurate depth placement.

Improvements in the Gold version:

- Increased ease in retracting the wire.
- 15-20% more tensile strength over the previous design further improves the reduced risk of wire transaction during the surgical intervention.

Homer Mammalok® Gold Breast Localization Needle *Box of 10*

231030G	20G (0.9 mm) x 3 cm
231050G	20G (0.9 mm) x 5 cm
231075G	20G (0.9 mm) x 7.5 cm
231100G	20G (0.9 mm) x 10 cm
231125G	20G (0.9 mm) x 12.5 cm

Hawkins™ II is uniquely repositionable to achieve accurate placement.

- Now available in two wire choices: FlexStrand™, a 19-strand “cable”, for maximum flexibility with minimal risk of transection, or a traditional hardwire, which minimizes “flex” during placement.
- Both wires offer a patented side “barb” for temporary fixation during a confirming mammogram. The needle is easily repositioned, if necessary.
- Easy-to-read centimetre markings facilitate accurate depth placement. A “throated” needle hub for easy wire loading.
- Exclusive skin retention clip prevents forward migration of wire during patient transport.
- Wire is marked in three places: I indicates wire at distal tip of needle; II indicates side barb deployment; and III indicates distal barb deployment.
- Standard marking cannula on wire, beginning 2.5 cm from distal tip, serves as a “landmark” for the surgeon.

“D” Wire Breast Localization Needle

- A D-shaped wire which provides a greatly increased cross sectional area aimed at reducing the risk of surgical transection. The tip of the hookwire is welded to significantly increase anchoring strength.
- Easy-to-read centimeter marks facilitate accurate depth placement. A “throated” needle hub gives easy wire loading.
- End hole needle allows for dye injection or aspiration of fluid.

Enteroclysis Catheters

The Enteroclysis Catheter is made of soft radiopaque polyvinyl-chloride for single or double contrast examination of the small bowel.

- 13F soft radiopaque catheter with a non-latex balloon.
- A large internal diameter allowing good contrast flow and a small external size for reduced patient discomfort.
- Stiff curved PTFE coated guidewire offers steerability of the catheter tip.
- The balloon prevents duodeno-gastric reflux of contrast media during examination.

Enteroclysis Catheter

Box of 2

6067 13 000 Set, 13F x 140 cm enteroclysis catheter with balloon, .052" (1.32 mm) x 150 cm stiffening wire with torque device

Galactography/Sialography Products

Polyethylene catheter or fine blunt cannula.

- Non-metal - atraumatic and no artefacts on X-ray.
- Nylon thread for cannulation and co-axial introduction.
- Dilators and injection cannula have blunt ends to minimize puncture of the duct walls.

Galactography/Sialography Products

Box of 10

6011 01 010 10 cm medium straight with nylon stylet and female luer lock
6011 01 018 18 cm medium straight with nylon stylet and female luer lock

RTD001X

Duodenography Catheters and Sets

Radiopaque polyvinylchloride catheter with closed end and 6 side holes for even distribution of contrast. The catheter is fitted with female luer lock for secure connection to syringe. Available as a set or as single-packed products.

- Soft radiopaque flexible catheter for quick introduction.
- Round tip for atraumatic introduction.
- Malleable PTFE coated stiffening wire with knob to facilitate insertion and manipulation.

Duodenography Catheters

Box of 10

6006 10 150 10F x 150 cm duodenography catheter

Box of 5

incl. Duodenography catheter and WORKER® Guidewire

6006 10 000 Set, 10F x 150 cm duodenography catheter, .052" (1.32 mm) x 150 cm stiffening wire with knob

6006 12 000 Set, 12F x 150 cm duodenography catheter, .052" (1.32 mm) x 150 cm stiffening wire with knob

6006 14 000 Set, 14F x 150 cm duodenography catheter, .052" (1.32 mm) x 150 cm stiffening wire with knob

Cholangiography Set

A blunt cannula with a connecting tube for contrast injection.

- Injection cannula is blunt to minimize puncture of the common bile duct or choledochus.

Cholangiography Set

Box of 10

6002 12 025 18G (1.2 mm) x 6.5 cm blunt curved needle with 25 cm connecting tube (female)

6002

HSG Catheters

The ideal choice of catheter for diagnostic procedures, such as radiological hysterosalpingography or hydro hysterosonography. The HSG catheter has a soft, concentric, non-latex balloon, which prevents leakage of saline or contrast media.

- Open ended, round distal tip provides atraumatic insertion with uniform contrast distribution.
- The unique, malleable introduction sheath easily positions the catheter through the cervix into the uterine cavity.
- Catheter shaft with good longitudinal steerability facilitates easy introduction into the cervical canal.
- Small catheter sizes allow introduction through an ultrasound probe.
- The open ended catheter allows guidewire introduction.

HSG Catheter

Box of 10

6600 05 040 5F x 40 cm, accepts guidewire .035" (0.89 mm)
